

Question #1 of 39

Question ID: 1472774

A valuation of a firm based on the current market price of its assets - liabilities is referred to as the firm's:

- A) operating value.
 - B) going-concern value.
 - C) liquidation value.
-

Question #2 of 39

Question ID: 1472801

The value of a conglomerate derived using a sum-of-the-parts valuation would *least accurately* be called the:

- A) liquidation value.
 - B) breakup value.
 - C) private market value.
-

Question #3 of 39

Question ID: 1472783

An analyst performing an asset valuation to detect investor's expectations about the future value of the variables that affect a stock's price is *most likely* using the valuation for:

- A) projecting the value of corporate actions.
 - B) generating a fairness opinion.
 - C) reading the market.
-

Question #4 of 39

Question ID: 1472776

A valuation of a firm based on the assumption that the firm will continue to operate is referred to as its:

- A)** status quo value.
 - B)** going-concern value.
 - C)** operating value.
-

Question #5 of 39

Question ID: 1472791

Which of the following *least* accurately represents one of the primary steps of the equity valuation process described by Pinto, Henry, Robinson, and Stowe?

- A)** Selecting a valuation model.
 - B)** Decision making.
 - C)** Assessing corporate governance.
-

Question #6 of 39

Question ID: 1472786

Notes to financial statements contain:

- A)** a description of the firm's financial condition and future prospects.
 - B)** important information about the firm's accounting practices and basis of presentation.
 - C)** discussion of the firm's accounting practices and basis of presentation.
-

Question #7 of 39

Question ID: 1472782

Which of the following is *least likely* a use of equity valuation?

- A)** Issuing fairness opinions.
- B)** Assessing corporate governance.
- C)** Projecting the value of corporate actions.

Question #8 of 39

Question ID: 1472797

Which of the following two ratios are likely to be used for determining value as a function of company peer benchmarks?

- A)** Price-to-earnings and price-to-book.
 - B)** Price-to-sales and debt/equity.
 - C)** Return on equity and net profit margin.
-

Question #9 of 39

Question ID: 1472788

Overestimating the growth rate of a firm in using a valuation model would result in a value that is likely to be:

- A)** too low.
 - B)** too high.
 - C)** can't tell from this information.
-

Question #10 of 39

Question ID: 1472778

Liquidation value is the:

- A)** market value of the total assets less the market value of the total liabilities.
 - B)** present value of future cash flow less the possible liquidation cost.
 - C)** cash generated by terminating a business, selling its assets, and repaying liabilities.
-

Question #11 of 39

Question ID: 1472772

A wise analyst will examine a valuation to determine:

- A)** how well it will be received by the firm's management.

- B)** ways to enhance a client's valuation.
 - C)** its sensitivity to changes in expectations.
-

Question #12 of 39

Question ID: 1472780

Which of the following is NOT a use of asset valuation?

- A)** Estimating inflation rates.
 - B)** Projecting the value of corporate actions.
 - C)** Issuing fairness opinions.
-

Question #13 of 39

Question ID: 1472789

When an analyst scrutinizes a firm's financial statements to try to discern how accurately the reported information reflects economic reality, and to evaluate the sustainability of the company's performance, the process is most likely to be referred to as a:

- A)** quality of earnings analysis.
 - B)** reasonable assurance analysis.
 - C)** comprehensive basis of accounting analysis.
-

Question #14 of 39

Question ID: 1472770

Valuation models for equities contain estimates of required returns and:

- A)** known future cash flows.
 - B)** expected future cash flows.
 - C)** an assumed continuation of past cash flows.
-

Question #15 of 39

Question ID: 1472779

For an analyst valuing public equities, the relevant concept of value is *most likely* to be:

- A)** fair market value.
 - B)** intrinsic value.
 - C)** orderly liquidation value.
-

Question #16 of 39

Question ID: 1472781

Minority shareholders often do not have control of the price at which the firm will be sold or merged with another firm. In order to safeguard their interests, minority shareholders will often seek an analyst's opinion of the value of the firm. This opinion is referred to as a:

- A)** fairness opinion.
 - B)** minority opinion.
 - C)** second opinion.
-

Question #17 of 39

Question ID: 1472799

A valuation of a firm based on the comparison of the firm with the market value of other firms is known as a:

- A)** peer group valuation.
 - B)** comparison valuation.
 - C)** relative valuation.
-

Question #18 of 39

Question ID: 1472803

An ownership perspective can be important for an analyst determining the value of a share position. A controlling interest suggests the *most* appropriate model is a:

- A)** time series model.
- B)** dividend discount model.
- C)** cash flow model.

Question #19 of 39

Question ID: 1472773

How can we account for different valuations for the same firm from several analysts even if they use the same required returns?

- A)** The analysts may be biased with personal opinions about management.
 - B)** Valuation models contain random errors.
 - C)** Valuations are based on the analyst's expectations.
-

Question #20 of 39

Question ID: 1472792

Disclosures of accounting practices and basis are most likely to be made in which part of a firm's financial reports?

- A)** The audit report.
 - B)** Footnotes.
 - C)** Management's discussion and analysis (MD&A).
-

Question #21 of 39

Question ID: 1472804

One justification for using multiple models to estimate firm value is:

- A)** the ability to examine differences in estimated values can reveal how a model's assumptions and the perspective of the analysis are affecting the estimated values.
 - B)** the ability to learn from each successive model and to make improvements.
 - C)** the ability to streamline and economize the development process through repeated use of the same generic baseline.
-

Question #22 of 39

Question ID: 1472785

What are three factors that would make a firm's accounting earnings less of a gauge of future economic performance? Late filings, unusually:

- A)** low amounts of loans to company insiders, and short tenure of senior management.
 - B)** high amounts of loans to company insiders, and long tenure of senior management.
 - C)** high amounts of loans to company insiders, and short tenure of senior management.
-

Question #23 of 39

Question ID: 1472800

A valuation of a firm based on the intrinsic value of the firm's investment characteristics is known as an:

- A)** asset based valuation.
 - B)** absolute valuation.
 - C)** absolution valuation.
-

Question #24 of 39

Question ID: 1472784

An analyst is *most likely* to review the footnotes to a firm's financial statements to find information about the firm's:

- A)** accounting practices.
 - B)** operation.
 - C)** cash flow activities.
-

Question #25 of 39

Question ID: 1472802

Important considerations for choosing an appropriate approach for valuing a given company are *least likely* to include:

- A)** Is the model consistent with the investor's IPS?
- B)** Is the model suitable given the purpose of the analysis?

C) Is the model appropriate based on the quality and availability of input data?

Anna Heller, CFA, is a financial journalist and editor working for Money in the Morning, an online daily journal aimed at the investment industry. She is currently reviewing three articles, which staff writers have submitted to her for imminent publication. Heller has a few concerns with the articles, which she notes down as follows.

Article One—The Modern Equity Valuation Process

Introductory Paragraph:

"The Grossman-Stiglitz paradox states that if security prices are informationally efficient there would be no reward to collecting and analyzing information. If this is the case no investor would collect and analyze information and the market price could not reflect intrinsic value. Further works have shown the easier intrinsic value is to estimate the bigger the potential divergence between price and value will be."

Illustrative Example:

"Assume an analyst had performed a valuation exercise on security HTWO and come up with the following results:

Analyst Derived Intrinsic Value \$25.20

Market Price \$23.85

Clearly, the analyst has identified a potentially undervalued security. However, attaining a positive risk adjusted return is only possible if the analyst's intrinsic value is correct. If he or she has incorrectly calculated the intrinsic value, then the potential for positive risk adjusted returns may be reduced or eliminated."

Heller is enthusiastic about including this example, but would like to extend it. She will instruct the staff writer to detail the valuation error and the actual mispricing if the analyst had calculated an intrinsic value, which was \$1.20 higher than the actual intrinsic value.

Article Two—I'm Going to Tell You My Concerns

Linpan Inc. Discussion:

"The blanket government ban of its new product line leads to a problem in deciding on an appropriate valuation for Linpan Inc. If the business is not a viable one then any kind of

valuation based on free cash flow growth, or perhaps even more outrageously, dividend growth, is pointless.

Assuming that the business voluntarily winds down over the next year, as I believe it should, and gradually sells off its assets, I would suggest that the value of the security should be no more than the cash the asset sales would bring in net of the firm's liabilities."

Heller wants to the writer to name this suggested valuation method.

Toys to You Inc. Discussion:

"A brief review of the somewhat fanciful chairman's statement, and a comparison of a summary income statement of Toys to You Inc. (TTY) compared to a direct competitor demonstrates the problems with TTY's generic strategy:

Figure 1

Income Statement (extracts) TTY Inc. Competitor		
Revenue	7.9	12.3
Net income	1.1	1.9

Chairman's Statement (extract)

"I believe the future of Toys to You is a bright one, despite the difficulties encountered over a turbulent last 18 months. Our continued commitment to producing traditional toys which match our competitors on quality and price will ensure our loyal customer base is maintained, while our cutting edge production technology will maintain our industry leading cost base and deliver superb returns to our investors."

Heller would like to add a conclusion regarding the problems with TTY's strategy.

Question #26 - 30 of 39

Question ID: 1480227

Why is the introductory paragraph in Article One incorrect?

- A) Most analysts believe that at some point intrinsic and market value will converge.
- B) The harder intrinsic value is to estimate the greater the potential divergence of market and intrinsic value.

- C)** Markets cannot be constantly informationally efficient as this would mean that intrinsic and market price would always be identical.
-

Question #27 - 30 of 39

Question ID: 1480228

Using Heller's suggestion of an analyst intrinsic value which is \$1.20 too high in the illustrative example for Article One, calculate the valuation error and the actual mispricing:

	<u>Valuation error</u>	<u>Actual mispricing</u>
A)	\$1.20	\$0.15
B)	\$1.35	\$0.15
C)	\$0.15	\$1.20

Question #28 - 30 of 39

Question ID: 1480229

In response to Heller's point regarding the Linpan discussion in Article Two, which of the following correctly identifies the suggested valuation method?

- A)** Going Concern Valuation.
 - B)** Liquidation Value.
 - C)** Orderly Liquidation Value.
-

Question #29 - 30 of 39

Question ID: 1480230

In the Toys to You Inc. (TTY) discussion in Article Two, which of the following would be the *most* appropriate conclusion for the writer to add?

- A)** TTY is attempting a strategy of product differentiation by committing to high quality products but appears to be failing as revenues are lower than its competitors.

- TTY is attempting a strategy of cost leadership by keeping prices equal to or lower
- B)** than its competitors but appears to be failing as margins are lower than its competitor's.
- TTY is attempting a strategy of cost leadership by producing with the lowest cost
- C)** base but appears to be failing as margins are lower than its competitor's.
-

Question #30 - 30 of 39

Question ID: 1480231

Which of the following would not be an example of one of Michael Porter's 5 competitive forces applicable to Toys to You?

- A)** A new chain of toy stores, Games & Goodies, has opened up in key Toys to You territories.
- B)** Toys to You's biggest supplier have 'due to unforeseen market conditions' added a 15% premium to key product lines.
- C)** Due to cash flow issues Toys to You have been forced to halve the marketing and advertising budget compared to the previous financial year.
-

Question #31 of 39

Question ID: 1472787

Which of the following would cause an analyst to have concern about a firm's quality of earnings?

- A)** The gain on the sale of a plant was included in operating earnings.
- B)** The firm took a write off for a recently impaired asset.
- C)** A firm books sales when orders are shipped.
-

Question #32 of 39

Question ID: 1472771

The goal of asset valuation, based on the expected future cash flows of an asset, is to establish an asset's:

- A)** relative value.

- B)** market value.
 - C)** intrinsic value.
-

Question #33 of 39

Question ID: 1472798

A valuation of a firm based on a review of other firms' price to earnings, price to sales, and price to return on investment ratios is an example of a:

- A)** relative valuation.
 - B)** fundamental valuation.
 - C)** broad-based valuation.
-

Question #34 of 39

Question ID: 1472777

The present value of expected future cash flows is the firm's:

- A)** going-concern value.
 - B)** terminal value.
 - C)** liquidation value.
-

Question #35 of 39

Question ID: 1472790

Financial Analyst Davey Jarvis, CFA, is evaluating Laura's Chocolates, Inc., which processes nut-based toffee for world-wide distribution. Which of the following steps is Jarvis *most likely* to take as part of the top-down valuation process?

- A)** Learn / understand the business.
 - B)** Perform momentum-based technical analysis.
 - C)** Evaluate price performance on an ongoing basis.
-

Joe Dentice has an opportunity to buy 5% of Gold Star Oil, Inc., a closely held oil company. He wants to value the company so as to make a decision on a fair price to pay for the investment.

Question #36 - 38 of 39

Question ID: 1472794

Consider the steps in the top down valuation approach as it is applicable for Gold Star. Dentice should forecast the growth of:

- A) Gold Star, the growth of the oil industry, and then the growth of the overall economy.
 - B) the overall economy, growth of the industry, and the growth rate of Gold Star.
 - C) each firm in the oil industry, the growth rate of the oil industry, and the growth rate of the economy.
-

Question #37 - 38 of 39

Question ID: 1472795

Which of the following models would be *most* suitable to value Gold Star?

- A) Liquidation value.
 - B) Absolute valuation.
 - C) Relative valuation.
-

Question #38 - 38 of 39

Question ID: 1472796

Which discounts must be taken into account while valuing the investment opportunity? Joe should take into account the:

- A) marketability, liquidity, and majority discounts in the valuation.
 - B) marketability, liquidity, and minority discounts in the valuation.
 - C) marketability, liquidity, and control premium in the valuation.
-

Question #39 of 39

Question ID: 1472775

A comparison between a firm's going-concern valuation and its liquidation value will show that the going-concern value will always be:

- A)** less than the liquidation value.
- B)** greater than the liquidation value.
- C)** equal to the present value of the expected continued operation of the firm.
